Recycling is an easy way to do your part for the environment. However, it is also important to take the time to rinse out plastic containers and/or to make sure they are empty especially when these containers hold chemicals. This assures the safety of collectors and processors and helps manufacturers of recycled products produce quality items that people will buy thus completing the closed loop system. For more information on how to increase your understanding of recycling please call 876-3340.

Recycling = a future we can be proud of.
